

#### Slide with timer

It will change right in five seconds

### Heading

In your slides text you can use <u>links</u> and various inline elements for *emotional* and **strong** emphasis or just for *italic* or **bold** decoration.

<code> is used for inline code samples.

# Two rows. Mighty heading

You can use two lines header but it would reduce space on a slide.

The "Ribbon" theme is designed for seven lines of code after one-line header by default.

This paragraph could be used as a footnote

#### **Various lists**

- Simple lists are marked with bullets.
- Ordered lists begin with a number.
- You can even nest lists one inside another.
  - 1. Or mix their types.
  - 2. But do not go too far.
  - 3. Otherwise audience will be bored.
- Look, seven rows exactly!

#### **Serious citation**

You can wrap one or more paragraphs into citation, which will make text italic and add a nice quote on the left. Giving the citation source would make it even more serious.

**Vadim Makeev** 

### When you have a lot of code

```
01. <html lang="en">
02. <head> <!--Comment-->
03. <title>Shower</title>
04. <meta charset="UTF-8">
05. k rel="stylesheet" href="s/screen.css">
06. <script src="j/jquery.js"></script>
07. </head>
```

# **Code in separate blocks**

Now you can add a note for each block

And explain what is interesting about it

# You can shout this way

# **Inner navigation**

- 1. Lets you change objects one by one
- 2. For example, show list items
- 3. Or switch pictures
- 4. And much more
- 5. But it will work only once
